Skills

About Me

Kia ora, I'm Jaelyn Lee, a software developer with a keen eye for detail and a goal-oriented mindset. I thrive on challenges and am always seeking to improve.

I possess a strong understanding of **TypeScript, React, Redux, React query, Node.js, and SQLite** technologies. Throughout my summer internship at Harmoney, I have gained valuable experience in various programs, such as working on live projects with the dev team and a side personal project to implement features to a production, which have helped me develop my technical skills and teamwork abilities. Additionally, I have strengthened my soft skills to communicate effectively with co-workers and maintain a positive work environment.

I am excited to take on new challenges in my career and contribute to my team's and organisation's success.

Experience

Harmoney / Full-stack software engineer intern
Nov 2023 - Feb 2024, Auckland, New Zealand

- Working on live projects to build both customer-facing web apps and back-end services
- Learn and understand overall business aspects
- Work in an agile delivery team, collaborating with devs, testers and product owners
- **Skills acquired:** TypeScript, React, Next.js, Nest.js, Prisma, Camunda, Storybook

Dev Academy Aotearoa / Student - Software Development Bootcamp
Mar 2023 - July 2023, Auckland, New Zealand

- 17-week full immersion software development boot camp
- Mimicked a real-life development team as closely as possible
- Learned new technologies while working in pairs and teams using the Agile methodology
- Developed enhanced awareness and empathy through extensive soft skills training and discussions
- **Skills acquired:** TypeScript, React, RTK, React query, Node.js, SQLite

Big Black Sacks / Operations & Logistics Officer

Aug 2021 - Mar 2023, Auckland, New Zealand

- Managed data tasks such as import/export, inventory, and warehouse
- Collaborated with accounting on customs, costs, and rates
- **Skills acquired:** Data management, cross-border logistics, inventory management, and warehouse coordination

Projects

Design your fitness / TypeScript, React.js, React Query, SQLite, Tailwind

This is a personal project that utilises React to create a full-stack app. It's designed to help users who want to start exercising, but may not be confident in planning their workout routines. The app generates a personalised workout plan based on user-provided information such as fitness goals and preferences.

Project link: https://build-your-fitness.vercel.app/

Neighbours / TypeScript, React.js, React Query, SQLite, Tailwind

This is a social app that can only be used within your neighbourhood. Users can check the latest news, weather, activities, and the marketplace. I worked on front-end development and styling, and I worked on front-end functionality to display data from the database and created a UI component for duplicative components, such as buttons or posts, to prevent writing repetitive code.

Through this project, I gained experience in agile methodology using a ticketing system and handling complex data structures.
